

**Abstract****Swimming pool covering system.**

The invention described is a swimming pool covering system of the type comprising a basic tarpaulin (2) and a covering tarpaulin (3) which are, together, irremovably fixed along the perimetric edge, an inflation valve (4) envisaged for the inlet of air between the basic tarpaulin (2) and the covering tarpaulin (3) in order to realize a chamber (5) and give the covering tarpaulin an arched configuration, a deflation valve (6) envisaged for the release of the air contained within the chamber (5). The basic tarpaulin has a perimetric edge (20) fitted with means of engagement for the anchorage to the swimming pool edges. The covering system is conceived to be transformed from a resting condition, in which it is inactive and the tarpaulins are folded up and placed in a storage bag, to an operative condition, in which the basic tarpaulin is placed covering the swimming pool and is located substantially just above the waterline, while the covering tarpaulin is lifted off the basic tarpaulin creating an air chamber between the two tarpaulins.

(54) Title: SWIMMING POOL COVERING SYSTEM

(57) Abstract: The invention described is a swimming pool covering system of the type comprising a basic tarpaulin (2) and a covering tarpaulin (3) which are, together, irremovably fixed along the perimetric edge, an inflation valve (4) envisaged for the inlet of air between the basic tarpaulin (2) and the covering tarpaulin (3) in order to realize a chamber (5) and give the covering tarpaulin an arched configuration, a deflation valve (6) envisaged for the release of the air contained within the chamber (5). The basic tarpaulin has a perimetric edge (20) fitted with means of engagement for the anchorage to the swimming pool edges. The covering system is conceived to be transformed from a resting condition, in which it is inactive and the tarpaulins are folded up and placed in a storage bag, to an operative condition, in which the basic tarpaulin is placed covering the swimming pool and is located substantially just above the waterline, while the covering tarpaulin is lifted off the basic tarpaulin creating an air chamber between the two tarpaulins.
